EXAMINATION REPORT - SEPARATE SHEET

Item V

Reasoned statement under Article 35(2) PCT with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The following document from the International Search Report has been 1. considered for the purposes of this report: D1 = EP-A-0000363;

2. Novelty

Closest prior art D1 relates to a method of manufacture of a polyamide and a laminate comprising the same. The process in claim 1 and the laminate in claim 4 differ therefrom in that the polyamide used is restricted to specific types of branched polyamides defined by formulas (1), (2) and (3) in claim 1, whereas, according to the argumentation in applicant's letter of reply dated 15.04.2004, the polyamide used in D1 is outside the scope of the said formulas in claim 1. Thus, the subject-matter of the present claims is considered to be novel and to meet the requirements of Article 33 (2) PCT.

Inventive Step 3.

The problem addressed by the present application is to provide an improved process with which substrates can at a high speed be coated with at least a layer of polyamide, wherein a significantly more stable extrudate results, which means that it remains practically flat, even at high production speeds and even when several layers are applied to the substrate simultaneously, and wherein polyamide layers with a highly uniform external appearance are obtained without the irregularities caused by gels. The problem has been solved by the process in claim 1 and the laminate in claim 4, wherein a layer of a polyamide according to formulas (1)-(3) is applied to a substrate. There are no doubts that the indicated problem has been solved by the claimed laminate/process having regard to the disclosure of the international application. The solution offered to the problem posed above cannot be derived in an obvious manner from a reading of closest prior art document D1, since such a laminate and process employing the specified polyamide according to formulas (1)-(3) in the present claims is neither disclosed nor suggested by the prior art to solve the problem posed in the application. Therefore, the present claims involve an inventive step (Article 33 (3) PCT).

Present claims 1-6 comply with the requirements of Article 33(4) PCT (industrial 4.
